

CK-7W Nokia Advanced Car Kit

Features

Manage your time more efficiently and manage your calls while on the go with the Nokia Advanced Car Kit. It offers convenient, easy-to-use handsfree communication in a vehicle, and allows you to connect your phone via the Pop-Port connector or wirelessly via a Bluetooth connection. An automatic radio mute turns down the tunes while you're on a call, and with a single button you can activate name dialing*, answer and end calls, and adjust the volume. The Nokia Advanced Car Kit is compatible with a broad range of mobile phones through its two connection options - either wirelessly via a Bluetooth connection or through cable via the Pop-Port connector.

**If supported by your phone*

Wireless Connection with Bluetooth Wireless Technology

Mobile phones equipped with Bluetooth wireless technology can establish a wireless connection with the Nokia Advanced Car Kit. Once paired with your phone, the kit automatically activates the connection when you start the ignition. Just slide in, buckle up, and you're ready to go.

Plug In to Pop-Port

Simply put your compatible phone into the holder mounted in the vehicle and the Nokia Advanced Car Kit takes over your communications. The compatible Nokia mobile phone holder will also charge your phone, so you can have a fully powered battery when it's time to leave the car.

Compatibility

Please see the europe.nokia.com/accessories web page for latest compatibility information.

These following products are compatible with the Nokia Advanced Car Kit CK-7W. The Nokia Advanced Car Kit CK-7W can be operated with a compatible mobile phone via wireless Bluetooth technology or with a wired Pop-Port connection. The operation in wired Pop-Port connection requires a compatible mobile holder with optional antenna coupler, if available. Please course your mouse to your compatible phone in the list below for connection options and available, compatible mobile holders and antenna couplers. Nokia 9500, Nokia 9300, Nokia N70, Nokia 6680, Nokia 6681, and Nokia 6270 do not support Re-dialing and Voice Dialing functions through the remote control button if the phone is connected via data cable and a mobile holder. You can re-dial and use voice dialing functions by using the phones keys. The following lists inform about mobile phones that support either wireless Bluetooth Technology, Handsfree Profile 1.0 or phones for which compatible mobile holders are separately available.
